Black screw installation completed

Install shelf nails on the reserved holes on the left and right side panels

A close-up photograph of a light-colored wooden panel, likely a shelf or cabinet component. The panel is oriented diagonally and features several pre-drilled holes. Two larger holes are located on the left and right edges, while several smaller holes are spaced along the top and bottom edges. The wood grain is clearly visible, and the panel is set against a dark brown background.

Use self-tapping threads to fix the cabinet door hinges.

A person is shown from the waist down, wearing a black patterned long-sleeved shirt, black pants, and white sneakers. They are standing on a brown cardboard floor, working on a light-colored wooden cabinet. The cabinet has a large door that is open, revealing several shelves inside. The person's hands are positioned to install a handle on the door. The handle is a dark, curved piece. The person is using a screwdriver to secure the handle with screws. The cabinet is made of light-colored wood with a vertical grain. The background is a plain, light-colored wall.

Install the cabinet door handle and fix it with handle screws

Install the cabinet door handle and fix it with handle screws

Stand up the cabinet

Remove the two upper shelf nails, place the shelf, and then install the shelf nails

—————Remove the two upper shelf nailers, put the shelf on top, and then install the shelf nailers

Place upper and lower shelves

When the cabinet doors are uneven, please adjust these two screws
